

Ultra Fine

x95[®]

SOLUTION GYPSUM

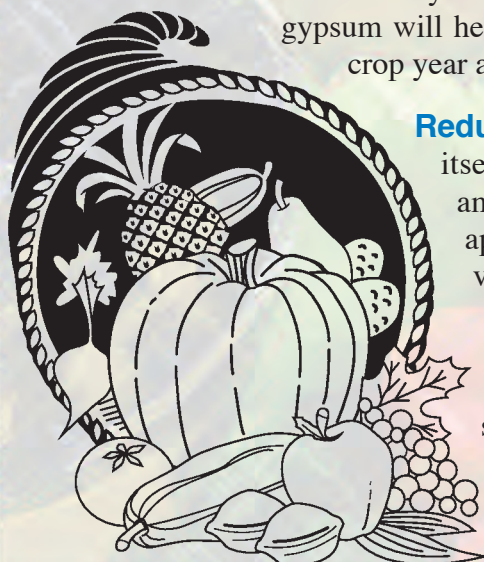

Get immediate results by injecting gypsum directly into irrigation water.

100%-natural gypsum from Western Mining and Minerals added to your water...

Increases water penetration allowing better infiltration of nutrients and fertilizers to the root area while reducing sodium and neutralizing alkalinity through improved leaching.

Breaks down hard soils and surface crusting which opens up the soil and helps prevent surface pooling and excessive run off. Improves aeration and provides both calcium and sulfate – two key ingredients that enhance nitrogen uptake and stimulate growth.

Improves crop yield. Fruit, vegetables, grapes, citrus trees, nuts – whatever you grow – soil treated regularly with gypsum will help produce a larger and healthier crop year after year.

Reduces growing costs. Gypsum itself is the most economical soil amendment and may be conveniently applied directly into irrigation water via common injector systems using Western Mining and Minerals' *Ultra Fine x95[®]* solution grade gypsum. Crops in gypsum treated soil also require less fertilizer, use less water, and often require less cultivation than soils without regular gypsum application.

#1 Selling Brand

- Extra Fine 325 Mesh Grind
- 95% Guaranteed Minimum Purity
- Use with ANY brand injector
- ALL irrigation systems, Even Drip!
- 100%-Natural, Mined Gypsum
- O.M.R.I. Listed, All Organic
- Available in Bags or Silo Bulk
